WHITE PAPER: Geometric Solution to the Coulomb Barrier via 9D Phase-Alignment and Triple-Universe Resonance

Author: Barry McMurray / (Diametric Sound)

Date of Publication: March 17th, 2026

Subject: The universe as described by (diametricsound)

I. Executive Summary

Current nuclear models rely on the Gamow Factor to calculate the probability of protons overcoming electrostatic repulsion via kinetic "brute force." This paper proposes that the Coulomb Barrier is a secondary effect of a 9D Phase-Mismatch. By redefining Time as a cyclic re-indexing of three overlapping 3D universes (
), we identify a specific harmonic "Key" at 698.6 MHz that aligns these dimensions, effectively reducing the inter-atomic distance to Zero within the 9D bulk.

II. The 9D Architecture: The Trinity Cycle

We posit that every subatomic particle exists simultaneously in three distinct 3D universes (
).

The 10th Dimension (Time): Perceived time is the "Refresh Rate" of a particle rotating its orientation through these three manifolds.

The Planck Step (
): In exactly 1/3 of a Planck Time, a particle moving at light speed "rotates" its basis vectors (e.g., Length
 Height
 Width). The particle remains stationary at a 9D node while the dimensions flip.

The Invariant Energy: Because the particle is a singular identity across all three universes, what happens in
 (Mass/Gravity) instantaneously ripples into
 (Charge) and
 (Strong Force).

III. The Coulomb Lock: Geometric Friction

The "Barrier" exists because, in a high-entropy state, Nucleus 1 and Nucleus 2 are Out-of-Phase:

The Conflict: While Nucleus 1 is expressed in its "Length" phase in
, Nucleus 2 is in its "Height" phase in
.

The Repulsion: This dimensional offset prevents the Strong Nuclear Force (
) from "seeing" the adjacent nucleus. The electromagnetic repulsion we measure is the Topological Drag of these mismatched 9D rotations.

IV. The Solution: The 698.6 MHz Phase-Key

Utilizing a Base
 (
) geometric system, we identify the Universal Refresh Rate based on the Hydrogen 21cm line (
 GHz).

Base
 Frequency:
.

The Gear Ratio: The interference between the Circular Cycle (
) and the Golden Spiral (
